KEY WORDS angle *(koki)* · degrees *(putu)* · acute *(koki whāiti)* · obtuse *(koki whānui)*

A Types of angles ●○○

Remember: Acute: less than 90°. Right angle: 90°. Obtuse: between 90° and 180°. Straight angle: 180°. Reflex: more than 180°.

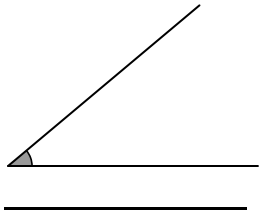

1. Write the type of each angle.

a) 35° _____ **b)** 90° _____ **c)** 120° _____ **d)** 180° _____

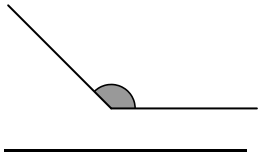

e) 270° _____ **f)** 89° _____ **g)** 91° _____ **h)** 300° _____

2. Write the type of each angle.

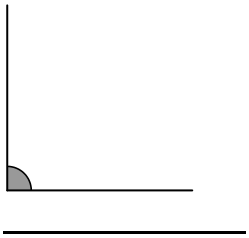

a)

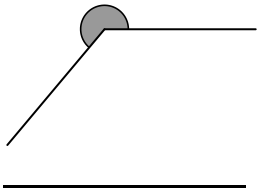

b)

c)

d)

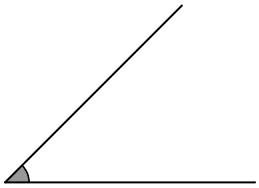

B Estimating angles ●●○

Remember: Compare the angle with a right angle (90°) and a straight angle (180°). Half of a right angle is 45°.

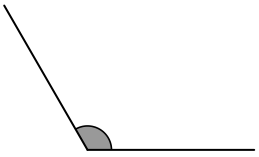

3. Circle the best estimate for the size of each angle.

a)

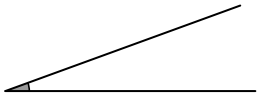

10° 45° 90° 135°

b)

30° 60° 90° 120°

c)

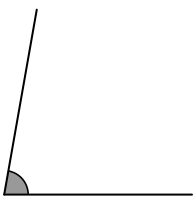

20° 60° 100° 140°

d)

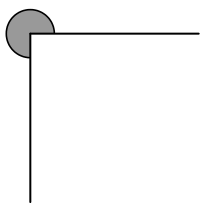

70° 100° 130° 160°

e)

20° 50° 80° 150°

f)

90° 180° 270° 350°

C Angles on a straight line ●●○

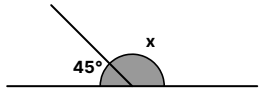

Remember: Angles on a straight line add to 180°.

4. Find the size of the angle marked x.

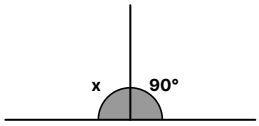

a)

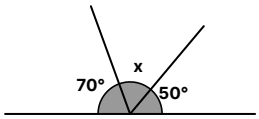

b)

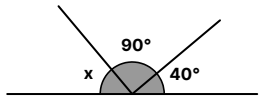

c)

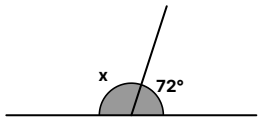

d)

e)

f)

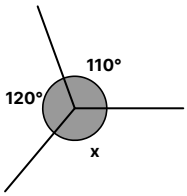

D Angles at a point ●●●

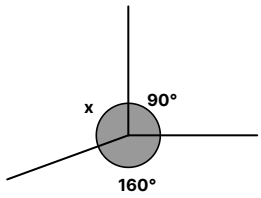

Remember: Angles that go all the way around a point add to 360°.

5. Find the size of the angle marked x.

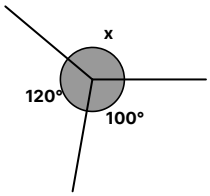

a)

b)

c)

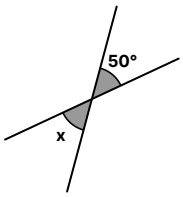

E Vertically opposite angles ●●○

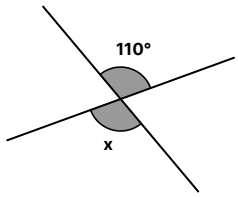

Remember: When two straight lines cross, the angles opposite each other are equal.

6. Find the size of the angle marked x.

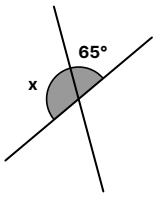

a)

b)

c)

F Mixed practice ●●●

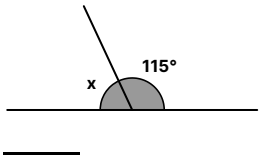

⚠ **Watch out:** Decide which rule fits before you calculate: a right angle (90°), a straight line (180°), a full turn (360°) or vertically opposite angles.

7. Find the size of the angle marked x.

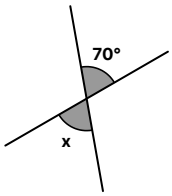

a)

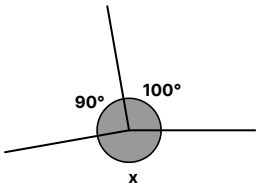

b)

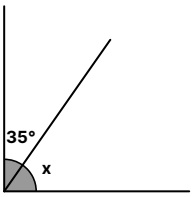

c)

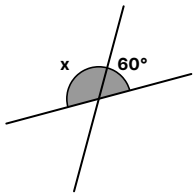

d)

e)

f)

★ Extension

8. What is the size of the smaller angle between the hands of a clock at 4 o'clock?

9. Can two obtuse angles fit together on a straight line? Explain.

10. Three angles meet at a point. Two of them are 120° and 150°. Find the third angle.

11. The hands of a clock make a right angle. Give two times when this happens.

12. An angle is 35°. How much more is needed to make a right angle? How much more to make a straight angle?
