Dot Plots and Bar Graphs

Name _____ Date _____ No calculator Version 1

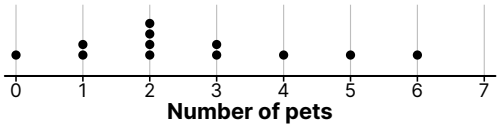

Scan to practise this topic online

KEY WORDS dot plot *(kauwhata ira)* · bar graph *(kauwhata pae)* · range *(whānuitanga)* · scale *(tauine)*

A Dot plots ●○○

Remember: Each dot is one piece of data. Count the dots above a number to see how many times that value comes up.

1. The dot plot shows the number of pets that each student in a group has.

a) How many students are in the group? _____

b) Which number of pets is the most common? _____

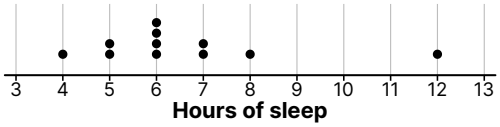

c) What is the largest number of pets? _____

d) How many students have more than 2 pets? _____

B Shape, middle and spread ●●○

Remember: Look at the whole picture. Where are most of the dots? How far is it from the smallest value to the largest (the range)? Is any value a long way from the rest?

2. The dot plot shows how many hours of sleep each child in a group had last night.

a) Which number of hours has the most dots?

b) What is the range of the data?

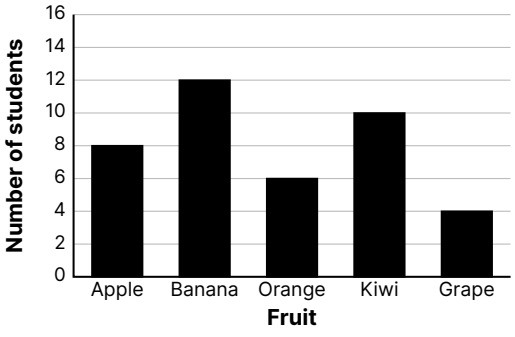

c) One value is a long way from all the others. Which value is it?

d) Describe where most of the data is.

C Bar graphs ●○○

Remember: The height of each bar shows how many are in that group. Read the height from the scale on the side. Check what each step of the scale is worth.

3. The bar graph shows the favourite fruit of the students in a class.

a) Which fruit is the most popular? _____

b) How many students chose orange? _____

c) How many students are in the class? _____

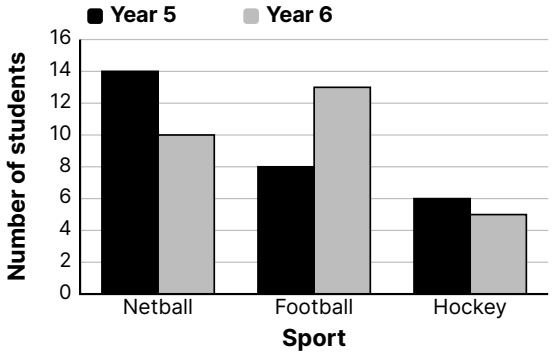

d) How many more chose banana than grape? _____

© 2026 Cell Tuition. You may print and photocopy this worksheet for your own classes and children. It may not be changed, sold or posted on other websites.

D Clustered bar graphs ●●○

Remember: A clustered bar graph shows two groups side by side. The key tells you which bar belongs to each group.

4. The clustered bar graph shows which sport the students in Year 5 and Year 6 chose.

a) How many Year 5 students chose netball?

b) How many Year 6 students chose football?

c) How many students chose hockey altogether?

d) Which sport was the most popular in Year 6?

e) How many Year 5 students are shown on the graph?

E Grouped data tables ●●●

Remember: When there are many different values, they are put into groups. The table shows how many values are in each group, but not what each value is.

5. The table shows the heights of the students in a class.

Height (cm)	120 to 129	130 to 139	140 to 149	150 to 159
Number of students	3	9	11	5

a) How many students are in the class?

b) Which group has the most students?

c) How many students are 140 cm or taller?

d) How many students are shorter than 140 cm?

e) Can you tell from the table exactly how tall the tallest student is? Explain.

★ Extension

6. A bar graph has no title, no labels on its axes and no scale. Explain why nobody can read it.
