Triangles and Quadrilaterals

Name _____ Date _____ No calculator Version 1 Scan to practise this topic online

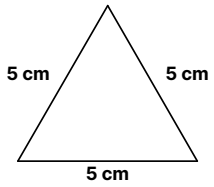

KEY WORDS equilateral *(tapatoru rite)* · isosceles *(tapatoru waewae-rite)* · scalene *(tapatoru hikuwaru)*

A Types of triangles ●○○

Remember: Equilateral: three equal sides. Isosceles: two equal sides. Scalene: no equal sides.

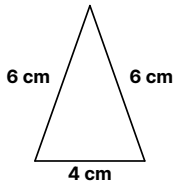

1. Is each triangle equilateral, isosceles or scalene?

a)

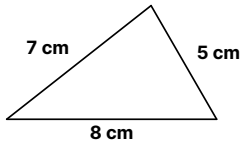

_____

b)

_____

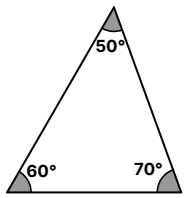

c)

_____

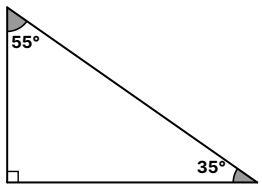

2. Is each triangle acute-angled, right-angled or obtuse-angled?

a)

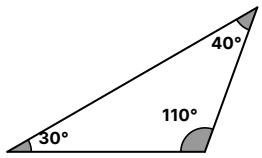

_____

b)

_____

c)

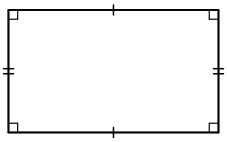

_____

B Types of quadrilaterals ●●○

Remember: A quadrilateral has four straight sides. On these drawings, sides with the same small marks are equal in length, arrows show parallel sides, and a small square shows a right angle.

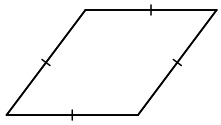

3. Name each quadrilateral. Choose from: square, rectangle, parallelogram, rhombus, trapezium, kite.

a)

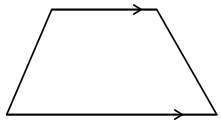

_____

b)

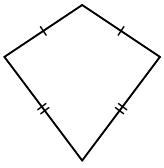

_____

c)

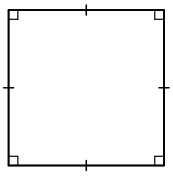

_____

d)

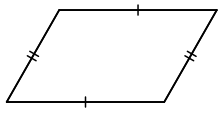

_____

e)

_____

f)

_____

C Properties of quadrilaterals ●●●

4. Which quadrilateral is being described?

a) I have four equal sides and four right angles.

b) I have exactly one pair of parallel sides.

c) I have four equal sides, but none of my angles is a right angle.

d) I have four right angles. My opposite sides are equal, but my sides are not all the same length.

e) I have two pairs of equal sides. The equal sides are next to each other, and none of my sides are parallel.

f) My opposite sides are parallel and equal. I have no right angles, and my sides are not all the same length.

5. Is each statement true or false?

a) Every square has four lines of symmetry.

b) Every rectangle has four equal sides.

c) A rhombus has two pairs of parallel sides.

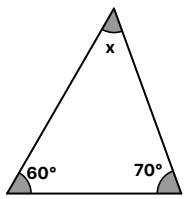

d) A trapezium has four right angles.

D Interior angles ●●●

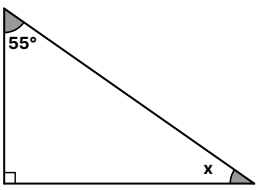

> **Remember:** The three angles of a triangle add to 180°. The four angles of a quadrilateral add to 360°.

6. Find the size of the angle marked x.

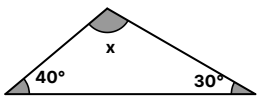

a)

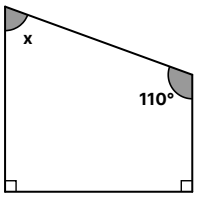

b)

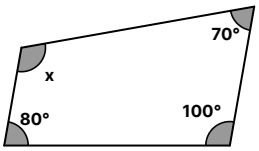

c)

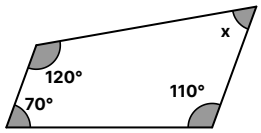

d)

e)

f)

★ Extension

7. Is a square also a rectangle? Explain.

8. Can a triangle have two right angles? Explain.
