Classifying Triangles

Name _____ Date _____ No calculator **Version 1** Scan to practise this topic online

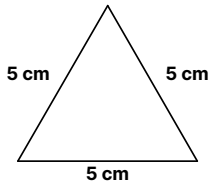

KEY WORDS equilateral *(tapatoru rite)* · isosceles *(tapatoru waewae-rite)* · scalene *(tapatoru hikuwaru)*

A Triangles by sides ●○○

Remember: Equilateral: three equal sides. Isosceles: two equal sides. Scalene: no equal sides.

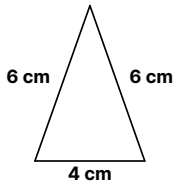

1. Is each triangle equilateral, isosceles or scalene?

a)

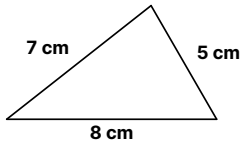

_____

b)

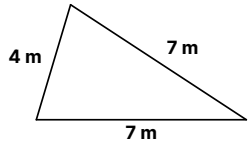

_____

c)

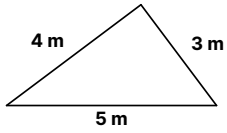

_____

d)

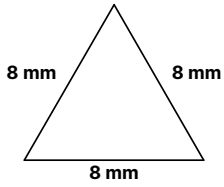

_____

e)

_____

f)

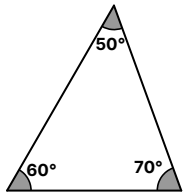

_____

B Triangles by angles ●○○

Remember: Acute-angled: all three angles are less than 90°. Right-angled: one angle is 90°. Obtuse-angled: one angle is more than 90°.

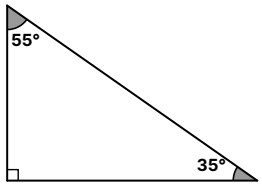

2. Is each triangle acute-angled, right-angled or obtuse-angled?

a)

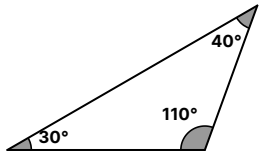

_____

b)

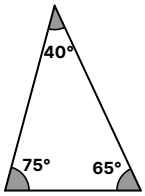

_____

c)

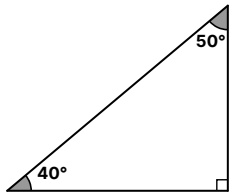

_____

d)

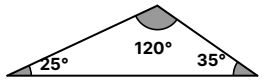

_____

e)

_____

f)

_____

C Sides and angles together ●●○

> **Remember:** A triangle has two names: one from its angles and one from its sides. Equal angles are opposite equal sides, so two equal angles mean an isosceles triangle.

3. Give both names for each triangle, for example "right-angled and isosceles".

a) Angles of 90°, 45° and 45°

b) Angles of 60°, 60° and 60°

c) Angles of 70°, 70° and 40°

d) Angles of 100°, 40° and 40°

e) Angles of 90°, 30° and 60°

f) Angles of 50°, 60° and 70°

g) Angles of 120°, 30° and 30°

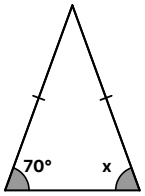

h) Angles of 80°, 20° and 80°

D Angles in equilateral and isosceles triangles ●●●

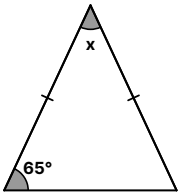

> **Remember:** Every angle of an equilateral triangle is 60°. In an isosceles triangle the two base angles (opposite the equal sides) are equal. The three angles of any triangle add to 180°.

4. The small lines mark the equal sides. Find the size of the angle marked x. Give a reason.

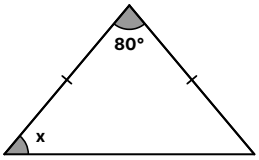

a)

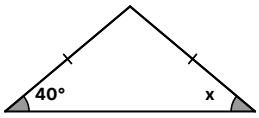

b)

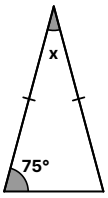

c)

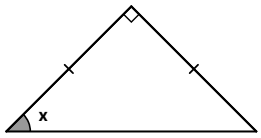

d)

e)

f)

★ Extension

5. Can a triangle be right-angled and equilateral? Explain.

6. Draw a triangle that is obtuse-angled and isosceles. Mark the equal sides.
