# Completing the Square

Name _____ Date _____ No calculator Version 1

Scan to practise this topic online

**KEY WORDS** completing the square · perfect square · quadratic *(pūrua)* · exact answer

## A Perfect squares ●○○

**Remember:** $(x+p)^2 = x^2 + 2px + p^2$. The number in front of $x$ is doubled, and the last number is squared.

**1.** Expand.

**a)** $(x+3)^2$ = _____ **b)** $(x-5)^2$ = _____ **c)** $(x+7)^2$ = _____

**d)** $(x-1)^2$ = _____ **e)** $(x+10)^2$ = _____ **f)** $(x-6)^2$ = _____

**2.** Fill in the boxes to make each one a perfect square.

**a)** $x^2 + 6x + \square = (x + \square)^2$ **b)** $x^2 + 10x + \square = (x + \square)^2$

**c)** $x^2 - 8x + \square = (x - \square)^2$ **d)** $x^2 - 14x + \square = (x - \square)^2$

**e)** $x^2 + 20x + \square = (x + \square)^2$ **f)** $x^2 - 18x + \square = (x - \square)^2$

**g)** $x^2 + 2x + \square = (x + \square)^2$ **h)** $x^2 - 24x + \square = (x - \square)^2$

## B Completed-square form ●●○

**Remember:** Halve the number in front of $x$ to get the bracket. Then subtract the square of that number.

**3.** Write each expression in the form $(x+p)^2 + q$.

**a)** $x^2 + 6x + 2$ **b)** $x^2 + 4x + 9$ **c)** $x^2 + 8x + 5$

**d)** $x^2 - 2x + 7$ **e)** $x^2 - 6x + 1$ **f)** $x^2 + 10x + 30$

**g)** $x^2 - 4x - 3$ **h)** $x^2 + 2x - 8$ **i)** $x^2 - 8x + 20$

**j)** $x^2 + 12x$ **k)** $x^2 - 10x + 11$ **l)** $x^2 + 14x + 50$

## C Solving when the square is complete ●●○

**Remember:** Take the square root of both sides. A positive number has two square roots, so write $\pm$.

**4.** Solve. Leave any square roots in your answers.

**a)** $(x+3)^2 = 16$ **b)** $(x-2)^2 = 25$ **c)** $(x+5)^2 = 1$

**d)** $(x-4)^2 = 49$ **e)** $(x+1)^2 = 5$ **f)** $(x-3)^2 = 7$

**g)** $(x+2)^2 - 9 = 0$ **h)** $(x-6)^2 - 4 = 0$ **i)** $(x+4)^2 - 12 = 0$

## D Solving by completing the square ●●●

⚠ **Watch out:** When you take the square root of both sides, remember the $\pm$.

**5.** Solve by completing the square. Leave any square roots in your answers.

**a)** $x^2 + 6x + 5 = 0$ **b)** $x^2 + 4x - 5 = 0$ **c)** $x^2 - 8x + 12 = 0$

**d)** $x^2 - 2x - 15 = 0$ **e)** $x^2 + 10x + 9 = 0$ **f)** $x^2 - 12x + 20 = 0$

**g)** $x^2 + 4x - 1 = 0$ **h)** $x^2 + 6x + 2 = 0$ **i)** $x^2 - 2x - 4 = 0$

**j)** $x^2 - 10x + 20 = 0$ **k)** $x^2 + 8x + 4 = 0$ **l)** $x^2 - 4x - 8 = 0$

## E The smallest value ●●●

**Remember:** A square is never negative, so $(x - 3)^2 + 2$ is smallest when the bracket is 0. Its smallest value is 2, when $x = 3$.

**6.** Complete the square. Then write down the smallest value of the expression and the value of $x$ that gives it.

**a)** $x^2 - 6x + 11$ **b)** $x^2 + 4x + 7$

**c)** $x^2 - 2x + 5$ **d)** $x^2 + 8x + 10$

**e)** $x^2 - 10x + 21$ **f)** $x^2 + 6x - 1$

**g)** $x^2 - 12x + 40$ **h)** $x^2 + 2x - 6$

## ★ Extension

**7.** Write $x^2 + 5x + 1$ in the form $(x + p)^2 + q$. Here $p$ and $q$ are fractions.

**8.** Write $2x^2 + 8x + 3$ in the form $a(x + p)^2 + q$.

**9.** Solve $x^2 + 3x - 1 = 0$ by completing the square. Give exact answers.

**KEY WORDS** completing the square · perfect square · quadratic *(pūrua)* · exact answer

## A Perfect squares ●○○

**Remember:** $(x+p)^2 = x^2 + 2px + p^2$. The number in front of $x$ is doubled, and the last number is squared.

**1.** Expand.

**a)** $(x+4)^2$ = _____ **b)** $(x-3)^2$ = _____ **c)** $(x+8)^2$ = _____

**d)** $(x-2)^2$ = _____ **e)** $(x+9)^2$ = _____ **f)** $(x-7)^2$ = _____

**2.** Fill in the boxes to make each one a perfect square.

**a)** $x^2 + 8x + \square = (x + \square)^2$ **b)** $x^2 + 12x + \square = (x + \square)^2$

**c)** $x^2 - 6x + \square = (x - \square)^2$ **d)** $x^2 - 16x + \square = (x - \square)^2$

**e)** $x^2 + 18x + \square = (x + \square)^2$ **f)** $x^2 - 20x + \square = (x - \square)^2$

**g)** $x^2 + 4x + \square = (x + \square)^2$ **h)** $x^2 - 22x + \square = (x - \square)^2$

## B Completed-square form ●●○

**Remember:** Halve the number in front of $x$ to get the bracket. Then subtract the square of that number.

**3.** Write each expression in the form $(x+p)^2 + q$.

**a)** $x^2 + 4x + 1$ **b)** $x^2 + 6x + 13$ **c)** $x^2 + 10x + 3$

**d)** $x^2 - 2x + 9$ **e)** $x^2 - 8x + 5$ **f)** $x^2 + 8x + 21$

**g)** $x^2 - 6x - 2$ **h)** $x^2 + 2x - 5$ **i)** $x^2 - 4x + 12$

**j)** $x^2 + 10x$ **k)** $x^2 - 12x + 16$ **l)** $x^2 + 16x + 70$

## C Solving when the square is complete ●●○

**Remember:** Take the square root of both sides. A positive number has two square roots, so write $\pm$.

**4.** Solve. Leave any square roots in your answers.

**a)** $(x+2)^2 = 9$ **b)** $(x-3)^2 = 36$ **c)** $(x+6)^2 = 1$

**d)** $(x-5)^2 = 64$ **e)** $(x+1)^2 = 3$ **f)** $(x-2)^2 = 11$

**g)** $(x+3)^2 - 16 = 0$ **h)** $(x-7)^2 - 4 = 0$ **i)** $(x+5)^2 - 18 = 0$

## D Solving by completing the square ●●●

⚠ **Watch out:** When you take the square root of both sides, remember the $\pm$.

**5.** Solve by completing the square. Leave any square roots in your answers.

**a)** $x^2 + 6x + 8 = 0$ **b)** $x^2 + 4x - 12 = 0$ **c)** $x^2 - 8x + 7 = 0$

**d)** $x^2 - 2x - 8 = 0$ **e)** $x^2 + 10x + 16 = 0$ **f)** $x^2 - 12x + 11 = 0$

**g)** $x^2 + 4x + 1 = 0$ **h)** $x^2 + 6x + 4 = 0$ **i)** $x^2 - 2x - 6 = 0$

**j)** $x^2 - 10x + 18 = 0$ **k)** $x^2 + 8x + 8 = 0$ **l)** $x^2 - 4x - 4 = 0$

## E The smallest value ●●●

**Remember:** A square is never negative, so $(x - 3)^2 + 2$ is smallest when the bracket is 0. Its smallest value is 2, when $x = 3$.

**6.** Complete the square. Then write down the smallest value of the expression and the value of $x$ that gives it.

**a)** $x^2 - 4x + 9$ **b)** $x^2 + 6x + 12$

**c)** $x^2 - 2x + 8$ **d)** $x^2 + 10x + 20$

**e)** $x^2 - 8x + 19$ **f)** $x^2 + 4x - 3$

**g)** $x^2 - 14x + 50$ **h)** $x^2 + 2x - 9$

## ★ Extension

**7.** Write $x^2 + 3x + 4$ in the form $(x + p)^2 + q$. Here $p$ and $q$ are fractions.

**8.** Write $3x^2 - 12x + 5$ in the form $a(x + p)^2 + q$.

**9.** Solve $x^2 + 5x - 1 = 0$ by completing the square. Give exact answers.
