i) $\frac{x+3}{2} = \frac{x+7}{4}$

E Problems in words ●●●

5. Write an equation for each problem, then solve it.

a) I think of a number, multiply it by 4 and then subtract 7. The answer is 29. Find the number.

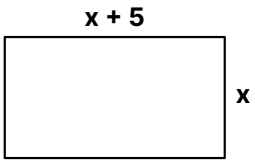

b) Three consecutive whole numbers add to 72. Find the three numbers.

c) A taxi charges $4 to start, plus $3 for every kilometre. A trip costs $31. How far was the trip?

d) Aroha is x years old. Her mother is 3 times as old. Their ages add to 52. How old is each of them?

e) The three angles of a triangle are x°, $2x^\circ$ and $(x+20)^\circ$. Find x.
