Simple and Compound Interest

Name _____ **Date** _____ Calculator allowed **Version 1**

KEY WORDS interest · principal · rate · per annum · simple interest · compound interest · balance

A Simple interest ●○○ WORK IN YOUR BOOK

Remember: Simple interest = principal × rate × time, with the rate written as a decimal.

1. Find the simple interest earned.

a) \$500 at 4% per year for 3 years

b) \$1,200 at 5% per year for 2 years

c) \$800 at 3.5% per year for 4 years

d) \$2,500 at 6% per year for 5 years

e) \$650 at 8% per year for 18 months

f) \$4,000 at 2.5% per year for 6 years

g) \$1,800 at 4.5% per year for 3 years

h) \$7,500 at 3% per year for 2 years

B The total amount ●●○ WORK IN YOUR BOOK

2. Find the total amount after simple interest is added.

a) \$300 at 5% per year for 4 years

b) \$1,500 at 4% per year for 3 years

c) \$2,000 at 7.5% per year for 2 years

d) \$900 at 6% per year for 2 years 6 months

e) \$5,000 at 3.2% per year for 5 years

f) \$750 at 9% per year for 4 years

C Finding the rate, the time or the principal ●●● WORK IN YOUR BOOK

3. Each question is about simple interest.

a) \$600 earns \$90 interest in 3 years. Find the interest rate per year.

b) \$2,000 is invested at 4% per year and earns \$320 interest. For how many years was it invested?

c) An amount earns \$150 interest in 2 years at 5% per year. Find the amount invested.

d) \$1,250 earns \$225 interest in 4 years. Find the interest rate per year.

D Compound interest, year by year ●●○ ANSWER ON THE SHEET

Watch out: With compound interest, each year's interest is worked out on the new balance, not on the original amount.

4. \$1,000 is invested at 10% per year compound interest. Find the balance at:

a) the end of year 1 = _____ **b)** the end of year 2 = _____ **c)** the end of year 3 = _____

5. \$2,000 is invested at 5% per year compound interest. Find the balance at:

a) the end of year 1 = _____ **b)** the end of year 2 = _____ **c)** the end of year 3 = _____

E Compound interest with a multiplier ●●● WORK IN YOUR BOOK

> **Remember:** Balance = principal × multiplier, to the power of the number of years. For 5% the multiplier is 1.05.

6. Find the balance after compound interest is added. Round to the nearest cent.

a) \$800 at 5% per year for 3 years

b) \$2,500 at 4% per year for 2 years

c) \$1,200 at 6% per year for 4 years

d) \$5,000 at 3% per year for 5 years

e) \$10,000 at 7% per year for 10 years

f) \$600 at 2.5% per year for 3 years

7. Find the compound interest earned (the balance take away the amount invested). Round to the nearest cent.

a) \$2,000 at 6% per year for 3 years

b) \$850 at 4% per year for 5 years

c) \$12,000 at 2.5% per year for 4 years

F Problems ●●● WORK IN YOUR BOOK

8. Bank A pays 6% per year simple interest. Bank B pays 5.5% per year compound interest. Ana invests \$3,000 for 4 years. How much more does she end up with at the better bank?

9. A car worth \$18,000 loses 12% of its value each year. Find its value after 3 years, to the nearest dollar.

10. How much simple interest does \$4,500 earn at 6.2% per year in 30 months?

11. Hemi borrows \$1,500 at 9% per year simple interest. He repays the loan and all the interest after 2 years. How much does he repay?

★ Extension FOR EARLY FINISHERS

12. \$1,000 is invested at 8% per year compound interest. How many whole years does it take to double?

13. A loan of \$2,000 charges 18% per year compound interest. Nothing is paid back. How much is owed after 2 years?

14. \$5,000 grows to \$5,618 in 2 years with compound interest. Find the interest rate per year.
