Mutually Exclusive Events and Either/Or

Name _____ **Date** _____ No calculator Version 1

KEY WORDS event · mutually exclusive · either/or · overlap · double counting · outcome

A Can both happen? ●○○

WORK IN YOUR BOOK

> **Remember:** Two events are mutually exclusive if they cannot both happen at the same time. Rolling a 2 and rolling a 5 on one dice are mutually exclusive.

1. An ordinary dice is rolled once. Are the two events mutually exclusive?

a) 2 and 5

b) Even number and 3

c) Even number and prime number

d) Odd number and even number

e) Number greater than 4 and multiple of 3

f) Number less than 3 and number greater than 4

g) Square number and odd number

h) Multiple of 3 and 4

i) Prime number and 1

j) Number greater than 2 and number less than 5

k) Multiple of 4 and odd number

l) Multiple of 3 and even number

B Adding probabilities ●●○

WORK IN YOUR BOOK

> **Remember:** If two events are mutually exclusive, add their probabilities to find the probability of one or the other.

2. An ordinary dice is rolled. Find the probability of getting:

a) a 2 or a 5

b) an even number or a 3

c) a number less than 3 or a number greater than 4

d) a multiple of 3 or a 4

e) a prime number or a 1

f) a multiple of 4 or an odd number

3. Cards numbered 1 to 10 are shuffled and one card is picked. Find the probability of getting:

a) a number less than 3 or a number greater than 8

b) a multiple of 5 or a 7

c) a multiple of 4 or a multiple of 3

d) a square number or a 10

e) a prime number or a multiple of 4

f) a multiple of 5 or a multiple of 3

C When events overlap ●●● — WORK IN YOUR BOOK

> ⚠ **Watch out:** If an outcome fits both events, adding counts it twice. Take away the probability of both happening.

4. A spinner has 8 equal sections numbered 1 to 8. Find the probability that it lands on:

a) an even number or a number greater than 5

b) a prime number or an odd number

c) a multiple of 4 or an even number

d) a square number or a number less than 3

5. An ordinary dice is rolled. Find the probability of getting:

a) an even number or a prime number

b) a number greater than 3 or an even number

c) an odd number or a multiple of 3

d) a square number or a number less than 3

6. Cards numbered 1 to 12 are shuffled and one card is picked. Find the probability of getting:

a) an even number or a multiple of 3

b) a prime number or an odd number

c) a multiple of 4 or an even number

d) a number greater than 8 or a multiple of 5

D Problems ●●● — WORK IN YOUR BOOK

7. In a class of 30 students, 12 play football and 10 play netball. 4 of these students play both. One student is chosen at random. Find the probability that the student plays football or netball.

8. A bag holds 5 red, 3 blue and 4 green counters. One counter is picked. Find the probability that it is red or green.

9. The probability that a bus is early is 0.15, and the probability that it is on time is 0.6. Find the probability that it is early or on time.

★ Extension — FOR EARLY FINISHERS

10. Cards numbered 1 to 20 are shuffled and one is picked. Find the probability of getting an even number or a multiple of 5. First list the numbers that are both.
